Test location: International Certification Services, Inc.

1100 Falcon Avenue Glencoe, MN 55336 Tele: 320-864-4444 Fax: 320-864-6611

Prepared by: International Certification Services, Inc.

1100 Falcon Avenue Glencoe, MN 55336

International Certification Services represents to the client that testing is done in accordance with standard procedures applicable and that reported test results are accurate within generally accepted commercial ranges of accuracy.

This report only applies to the specific samples tested under stated test conditions. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. International Certification Services shall have no liability for any deductions, inferences or generalizations drawn by the client or others from this report.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval.

1.0 TEST SUMMARY

TEST REPORT: #090117B

COMPANY: WaterleakX Systems, LLC.

AGENT: International Certification Services, Inc.

PHONE: 320-864-4444

TEST DATE: 09 January, 2017

EQUIPMENT UNDER TEST: Repeater Unit (SRTS005)

GENERAL TEST SUMMARY: The testing was performed at International Certification

Services, Inc. at 1100 Falcon Ave, Glencoe, MN 55336

VERIFICATION / **CERTIFICATION** The WaterleakX Systems, LLC. Repeater Unit (SRTS005)

STATUS:

was found to be in compliance with the FCC Part 15 Subpart

C, Section 15.231 requirements.

MODIFICATIONS NECESSARY: None

TESTED BY WRITTEN BY

Applicable Standards

47 CFR Ch.1

FCC Part 15 Radio Frequency Devices

Subpart C Intentional Radiators

Section 15.231 Periodic Operation in the band 40.66 – 40.70 Mhz,

and above 70 Mhz.

2.1 Referenced Standards

ANSI C63.10-2013 Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 Khz to 40 Ghz.

ANSI C63.4 2014 Procedures for Compliance Testing of Unlicensed Wireless Devices

2.2 Equipment Units Tested

The equipment tested was a 418. Mhz Repeater Unit. This Intentional Radiator model: SRTS005 is a repeater unit that is part of a water detection system. This unit uses a printed circuit board mounted antenna (AntennaFactor by Linx, model: ANT-418-HEH helical antenna soldered directly on the PC board. The transmitter circuit is a LINX LR transmitter and the Microcontroller used in the system is an ATXMEGA32E5 operating at 8 Mhz. This device is automatically triggered and shuts off after a 106 mS time period. The total ON time of the transmitter was measured at 1.75 seconds in a 1 hour time period.

2.3 Equipment and Cable Configuration

See photo of the EUT test configuration setup in Attachment A

2.4 List of Test Equipment

Test Equipment	<u>Model</u>	<u>S/N</u>	Calibration Due Date
Spectrum Analyzer Preamp Biconical Antenna Log Periodic Antenna (200-1000 MHz)	Hewlett-Packard 8566B P0035 EMCO Model 93110B EMCO 3146	2421A00458 2443A03658 105799 9111-3280	04/07/17 03/26/17 04/17/17 04/17/17
Horn Antenna (1-18 Ghz) LISN Transient Suppresser	EMCO 3115 FCC -LISN-50-25-2 EM-7600	2334 109 290	08/17/18 08/11/17 09/24/17

Measurement cable losses, and antenna correction factors are included in the data sheets. The Resolution BW was set at 1 Mhz and the Video BW was set at 1 Hz with a Span of 0 Hz to perform the correct average detected measurements over 1000 Mhz.

2.5 Units of Measurement.

All measurements were taken in dBuV/m with the antenna located at 3 meters distance from the EUT. Frequency measurements are recorded in Mhz

INTERNATIONAL

2.6 Location of Test Site

The open area test site (OATS) measurement facility used to collect the data was International Certification Services, Inc. at 1100 Falcon Ave in Glencoe, MN 55336. This site has been certified to be in spec of the normalized site attenuation per ANSI C63.10-2013.

2.7 Measurement Procedures

The antenna was placed at a distance of 3 meters from the EUT. The EUT was set on an insulating table in the OATS site and rotated through 360 degrees to determine the worst case EUT orientation. The antenna was then positioned vertical and horizontal to determine which antenna polarity orientation was worst case. Certification data was recorded at all the transmitter frequencies from the fundamental to the 10th harmonic at an antenna height variation of from 1-4 meters.

2.8 Reporting Measurement Data

See data sheets and plots in Attachment B.

2.9 Radiated Emissions Data

The frequency and amplitude of the tuned frequency of the EUT along with the frequencies and amplitudes of the harmonics up to the 10th harmonic are reported in the data sheets in Attachment B. This information is plotted against the limit of section 15.231 of FCC Part 15 subpart C. Both Horizontal and Vertical antenna polarities as well as antenna heights of 1 to 4 meters were observed.

The Final Level, expressed in dBuV/m, is arrived at by taking the reading from the spectrum analyzer (Level dBuV) and adding the antenna correction factor and cable loss factor (Factor dB) and subtracting the preamp gain. This result then has the FCC limit subtracted from it to provide the margin which gives the tabular data as shown in the data sheets in Attachment B.

Example:

<u>Frequency</u>	<u>Level</u>		<u>Factor</u>	=	Corr Data	-	FCC Limit	=	<u>Margin</u>
(MHz)	(dBuV)		(dB)	=	(dBuV/m)	-	(dBuV/m)	=	(dB)
100.0	20.6	+	11.0	=	31.6	-	43.5	=	-11. 9

2.10 Conducted Emissions Data

The initial step in collecting conducted emission data is the use of a spectrum analyzer to do a peak scan of the EUT. The plot is then used for reference, and a tuned receiver is then used to gather the quasi-peak measurement. The final level, expressed in dBuV, is arrived at by taking the reading from the EMI receiver. The Final Level given is compared directly to the Standard limit. To convert the data measurement between dBuV and uV, the following conversions apply:

dBuV=20(log uV) $uV=log^{-1}(dBuV/20)$

2.11 Operating Frequency Data for Intentional Radiators

All operating frequencies and harmonic frequencies are recorded in the data sheets in Attachment B.

2.12 Occupied Bandwidth Data for Intentional Radiators

The occupied BW data for the EUT is listed in the data sheets in Attachment B.

2.13 Summary of Results

The EUT passed the requirements of FCC Part 15 Subpart C, Section 15.231 with a maximum field strength of 71.2 dBuV/m at the fundamental frequency of 418 Mhz against a limit of 80.28 dBuV/m. No modifications were necessary to accomplish this compliance.

ATTACHMENT A

RADIATED AND CONDUCTED MEASUREMENT TEST SET UP

WaterleakX Systems Repeater Unit Model: SRTS005 Radiated Emissions Test Configuration

WaterleakX Systems Repeater Unit Model: SRTS005 Conducted Emissions Test Configuration

ATTACHMENT B DETAILED TEST DATA SHEETS

WaterleakX Systems, LLC.

Repeater Unit Model: SRTS005

Test Technician: Duane R. Bagdons

Center Frequency: 418.012 Mhz

Preliminary testing was done to determine what antenna polarity and antenna height generated the highest signal levels. Tests were performed at this test configuration and then each frequency was maximized to 0-360 degrees orientation and antenna height of 1-4 meters to determine the worst case output amplitude of each model.

15.231 (a) (1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

15.231 (a) (2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.

International Certification Services, Inc.

January 09, 2017

INTERNATIONAL

WaterleakX Systems, LLC Repeater Unit Model: SRTS005 Transmit Burst

International Certification Services, Inc.

January 09, 2017

The EUT passed this requirement.

15.231 (a) (3) Periodic transmissions at regular predetermined intervals are not permitted....There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

The Transmit burst is typically 103.3291 mS long. The actual transmit time in a 1 hour period is 1.756594 seconds.

The EUT passed this requirement.

15.231 (a) (4) Intentional Radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm condition.

Not Applicable

15.231 (a) (5) Transmission of set-up information for security systems may exceed the transmission duration limits in paragraphs (a)(4) and (a)(2) of this section, provided such transmissions are under the control of a professional installer and do not exceed ten seconds after a manually operated switch is released or a transmitter is activated automatically. Such set-up information may include data.

Not Applicable

15.231 (b) In addition to the provisions of Section 15.205, the field strength of emissions from intentional radiators operated under this Section shall not exceed the following:

Fundamental Freq (Mhz)	Field Strength of Fundamental (uV/m)	Field Strength of Spurious Emissions (uV/m)
40.66-40.70	2250	225
70-130	1250	125
130-174	1250 to 3750	125 to 375
174-260	3750	375
260-470	3750 to 12,500**	375 to 1250**
Above 470	12,500	1250

^{**}Linear interpolations

The maximum permitted fundamental field strengths are as follows:...for the band 260-470 Mhz, uV/m at 3 meters = 41.6667 (F) - 7083.3333. The maximum permitted unwanted emissions level is 20 dB below the maximum permitted fundamental level.

LIMIT:

Fundamental Freq (Mhz)	Field Strength of Fundamental (uV/m)	Field Strength of Fundamental (dBuV/m)	Field Strength of Spurious Emissions (uV/m)	Field Strength of Spurious Emissions (dBuV/m)
418	10,333.35	80.28	1033.335	60.28

15.231 (b)(1) The field strength limits are specified at a distance of 3 meters.

15.231 (b)(2) Intentional Radiators operating under the provisions of this Section shall demonstrate compliance with the limits on the field strength of emissions, as shown in the above table, based on the average value of the measured emissions. As an alternative, compliance with the limits in the above table may be based on the use of measurement instrumentation with a CISPR quasi-peak detector. The specific method of measurement employed shall be specified in the application for equipment authorization. If average emissions measurements are employed, the provisions in Section 15.35 for averaging pulsed emissions and for limiting peak emissions apply. Further, compliance with the provisions of Section 15.205 shall be demonstrated using the measurement instrumentation specified in that section.

INTERNATIONAL

Waterleak X Systems, LLC Wireless Controller Model: 2AHFR-SRTS005 FCC 15.209 Spurious Emissions

International Certification Services, Inc.

January 09, 2017

NOTE: No signals were observed below 30 Mhz.

15.231 (b)(3) The limits on the field strength of the spurious emissions in the above table are based on the fundamental frequency of the intentional radiator. Spurious emissions shall be attenuated to the average (or, alternatively, CISPR quasi-peak) limits shown in this table or to the general limits shown in Section 15.209, whichever limit permits a higher field strength.

See the graphs in the above section. The EUT passes this requirement.

15.231 (c) The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 Mhz and below 900 Mhz. For devices operating above 900 Mhz, the emissions shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

Waterleak X Systems, LLC Wireless Controller Model: 2AHFR-SRTS005 FCC 15.231(c) Bandwidth Measurement

International Certification Services, Inc.

January 09, 2017

The specified 20 dB Bandwidth is 0.25% of the Fundamental Frequency which calculates to be 1.05 Mhz. The EUT measured 0.38 Mhz.

The EUT passes this requirement

15.231 (d) For devices operating within the frequency band 40.66 to 40.70 Mhz, the bandwidth of the emission shall be confined within the band edges and the frequency tolerance of the carrier shall be +/- 0.01%. This frequency tolerance shall be maintained for a temperature variation of -20 degrees to +50 Degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using a new battery.

Not Applicable

15.231 (e) Intentional Radiators may operate at a periodic rate exceeding that specified in paragraph (a) and may be employed for any type of operation, including operation prohibited in

INTERNATIONAL

paragraph (a), provided the intentional radiator complies with the provision of paragraphs (b) through (d) of this Section, except the field strength table in paragraph (b) is replaced by the following:

Fundamental	Field	Field	Field	Field
Frequency	Strength of	Strength of	Strength of	Strength of
(Mhz)	Fundamental	Fundamental	Spurious	Spurious
	(uV/m)	(dBuV/m)	Emission	Emission
			(uV/m)	(dBuV/m)
40.66-40.70	1000	60	100	40
70-130	500	53.979	50	33.979
130-174	500 to 1500**		50 to 150**	
174-260	1500	63.52	150	43.52
260-470	1500 to		150 to 500**	
	5000**			
418	4133.347	72.326	413.3329	52.326
Above 470	5000	73.979	500	53.979

In addition, devices operated under the provisions of this paragraph shall be provided with a means for automatically limiting operation so that the duration of each transmission shall not be greater than one second and the silent period between transmissions shall be at least 30 times the duration of the transmission but in no case less than 10 seconds.

Not Applicable for this EUT

15.207 (c) Conducted Emissions Data

The initial step in collecting conducted emission data is the use of a spectrum analyzer to do a peak scan of the EUT. The plot is then used for reference, and a tuned receiver is then used to gather the quasi-peak measurement. The final level, expressed in dBuV, is arrived at by taking the reading from the EMI receiver. The Final Level given is compared directly to the Standard limit. To convert the data measurement between dBuV and uV, the following conversions apply:

dBuV=20(log uV) $uV=log^{-1}(dBuV/20)$
